Introduction

1.1 Motivation

- Describe beagle
- Advantages of beagle
- drawbacks
- some instrumentation

1.1.1 A Theoretical Framework

Background

2.1 First-Order Logic Terms and Notation

This thesis focuses around the extension of *beagle*, a *first-order logic* (FOL) theorem prover. In order to understand beagle's purpose and functions a basic understanding of the FOL logical system is required. This section provides a rudimentary overview of FOL syntax and uses; but also includes an explanation of any specialised terms and notation used throughout the paper.

2.1.1 FOL basics

2.1.2 Calculi and FOL problems

2.1.3 The Superposition Calculus

Should contain

- Variables
- Symbols
- Predicates
- Quantifiers
- Notion of soundness and completeness
- Description of a 'calculus'

2.1.4 Specialised Syntax in this Paper

- Positions

2.2 Automated Reasoning and Theorem Proving

Automated Reasoning is a rapidly growing field of research where computer programs are used to solve problems stated in first order logic statments or other formal logics.

Some existing theorem provers include:

SPASS

[Weidenbach et al. 1999]

Vampire

[Riazanov and Voronkov 1999]

E

[Schulz 2002]

Should contain

- Theorem prover examples

2.3 Term Indexing

Term indexing is a technique used to better locate logical terms which match rules in a prover's calculus.

Top Symbol Hashing

Discriminant Trees

2.4 Fingerprint Indexing

Fingerprint Indexing is a recent technique developed by Schulz [2012], the creator of the E prover.

Table 2.1: Fingerprint matches for Unification [Schulz 2012, p6]

	f_1	f_2	A	B	N
f_1	Y	N	Y	Y	N
f_2	N	Y	Y	Y	N
A	Y	Y	Y	Y	N
B	Y	Y	Y	Y	Y
N	N	N	N	Y	Y

Table 2.2: Fingerprint matches for Matching [Schulz 2012, p6]

	f_1	f_2	A	B	N
f_1	Y	N	N	N	N
f_2	N	Y	N	N	N
A	Y	Y	Y	N	N
B	Y	Y	Y	Y	Y
N	N	N	N	N	Y

2.5 The Beagle Theorem Prover

The core implementation of Beagle was developed by Peter Baumgartner et al. of NICTA. Its purpose was to demonstrate the capabilities of the *Weak Abstraction with Heirachic Superposition Calculus*; which allows the incorporation of prior knowledge via a ‘background reasoning’ modules.

2.5.1 The Heirachic Superposition with Weak Abstraction Calculus

2.5.2 Beagle’s Shortcomings

2.6 Tools Used

2.6.1 Scala

As mentioned above *beagle* is written in *Scala*, the Scalable Language. Scala is a functional language and may be confusing to those who are not familiar with the functional programming paradigm. This thesis will contain occasional snippets of Scala code; but note that any snippets used will be accompanied by an explanation and in general an understanding of Scala/functional programming is not required.

2.6.2 VisualVM

2.6.3 Eclipse

Implementing Fingerprint Indexing

3.1 Structure of *beagle*

To be able to make any significant contribution to the *beagle* project, I first had to gain a solid understanding of the existing Scala codebase.

Figure of Clause/Expression syntax tree

Describe main inference loop

Refer to results for instrumentation; showing what may be improved with indexing.

3.2 Implementing Fingerprint Indexing

The first step in adding Fingerprint Indexing to *beagle* is creating the indexer itself; a Scala class which will manage the index and provide functions for adding to/retrieving from the Index.

To compare two fingerprints with each other we look at them side-by-side and check that each position shows a Y in the Fingerprint unification table.

```

1  /** Check two Fingerprint features for compatibility based
2    * on the unification table (See page 6 of [Schulz 2012]).
3    * This table is reduced to 4 cases:
4    * - True if Features are equal,
5    * - True if at least one Feature is B,
6    * - True if at least one Feature is A; but no Ns,
7    * - False otherwise */
8  def compareFeaturesForUnification
9    (a:FPFeature, b:FPFeature) : Boolean =
10 (a == b) ||
11 (Set(a,b) match {
12   case x if (x contains FPB) => true
13   case x if (x contains FPA) => !(x contains FPN)
14   case _ => false})

```

Listing 1: Scala implementation of the Fingerprint unification table. [Schulz 2012, p6]

The following block of Scala code extracts a single Fingerprint Feature from a Term at the given position.

```

1  /** Extract the operator at position pos. Note that matching Var
2    * and Funterm is an exhaustive pattern for Term. */
3  def extractFeature(term: Term, pos: Position) : FPFeature = pos match {
4    case Nil      => term match {
5      case t:FunTerm => FPF(t.op) // Found function symbol, return it
6      case t:Var     => FPA       // Found variable, return A
7    }
8    case p :: ps => term match {
9      case t:FunTerm => try {extractFeature(t.args(p), ps) }
10                       //Attempted to index non-existent position, return N
11                       catch {case e:IndexOutOfBoundsException => FPN}
12      // Found variable BEFORE end of position, return B
13      case t:Var     => FPB
14    }
15  }

```

Listing 2: Scala code to extract fingerprint features for matching.

3.3 Adding Indexing to *Beagle*

3.3.1 Refactoring Current Implementation

Actually making use of our indexer class will require significant modification to *beagle*'s structure and proving sequence.

Refer to class and flow diagrams from 3.2

3.3.2 Initial Problems

3.4 Tailoring to *Beagle*'s Heirachic Superposition with Weak Abstraction Calculus

3.4.1 Foreground and Background Terms

In the Heirachic Superposition with Weak Abstraction Calculus all terms have a concept of being 'Foreground' or 'Background'.

Extended feature match table and code

Table 3.1: Extended Fingerprint matches for Unification

	f_1	f_2	A	B	N	PBG f_1	PBG f_2	PBG A	PBG B	PBG N
f_1	Y	N	Y	Y	N					
f_2	N	Y	Y	Y	N					
A	Y	Y	Y	Y	N					
B	Y	Y	Y	Y	Y					
N	N	N	N	Y	Y					
PBG f_1	Y	N	Y	Y	N					
PBG f_2	N	Y	Y	Y	N					
PBG A	Y	Y	Y	Y	N					
PBG B	Y	Y	Y	Y	Y					
PBG N	N	N	N	Y	Y					

Results

4.1 Beagle Before Indexing

4.2 Indexing Subsumption

4.2.1 False Positives

4.2.2 Speed

4.2.3 Comparison

4.3 Tailored Improvements

4.3.1 Backgroundedness

4.4 Further Indexing

Conclusion

5.1 Why this is a Very Clever Thesis

Some Other Stuff

A.1 Why I Did It

More Stuff
