- Beagle has some major shortcomings which prevent it being more than a proof of concept.
- In particular, it lacks an efficient manner of locating terms for inference
- Enter 'Term Indexing', a method for efficiently managing and collecting these terms.

- Normal Superposition rule

## Positive Superposition

$$\frac{l \approx r \vee C \quad s[u] \approx t \vee D}{(s[r] \approx t \vee C \vee D)\sigma}$$

Where (i)  $\sigma = \text{simple mgu}(l, u)$ ,  
and (ii)  $u$  is not a variable.

# The Hierarchic Superposition with Weak Abstraction Calculus

- Extension of the Superposition Calculus to accommodate hierarchic reasoning.

## Positive Superposition

$$\frac{I \approx r \vee C \quad s[u] \approx t \vee D}{\text{abstr}((s[r] \approx t \vee C \vee D)\sigma)}$$

Where (i)  $\sigma = \text{simple mgu}(I, u)$ ,  
(ii)  $u$  is not a variable,  
(iii)  $r\sigma \not\approx I\sigma$ ,  
(iv)  $t\sigma \not\approx s\sigma$ ,  
(v)  $I$  and  $u$  are not pure background terms,  
(vi)  $(I \approx r)\sigma$  is strictly maximal in  $(I \approx r \vee C)\sigma$ ,  
and (vii)  $(s \approx t)\sigma$  is strictly maximal in  $(s \approx t \vee D)\sigma$ .

- Simplification rules exist to implement special cases of the rules in the Hierarchic Superposition with Weak Abstraction Calculus.
- These special cases allow redundant Clauses to be removed; preventing clutter in the inference process.

Comparisons

- Simplification rules exist to implement special cases of the rules in the Hierarchic Superposition with Weak Abstraction Calculus.
- These special cases allow redundant Clauses to be removed; preventing clutter in the inference process.
- The two main simplification rules used by Beagle are *Negative Unit Simplification* and *Demodulation*
- These rules require checking for *subsumption*, which requires implementing a new comparison table for Fingerprint Indexing.

# Indexing Negative Unit Simplification

**Negative Unit Simplification** 
$$\frac{l \not\approx r \quad s \approx t \vee C}{C}$$

Where (i)  $\exists \sigma \text{ s.t. } (l \approx r)\sigma \equiv s \approx t$ .

The clause  $s \approx t \vee C$  may be removed.

# Indexing Negative Unit Simplification

$$\text{Negative Unit Simplification} \quad \frac{l \not\approx r \quad s \approx t \vee C}{C}$$

Where (i)  $\exists \sigma \text{ s.t. } (l \approx r)\sigma \equiv s \approx t$ .

The clause  $s \approx t \vee C$  may be removed.

- Searching for valid subsuming Literals is extremely time consuming.
- Requires an index capable of matching Equations rather than Terms.

# Indexing Demodulation

- Outline
- Project Overview
- Motivation
- Background
  - First Order Logic
  - Terminology

  - Term Indexing
  - Fingerprint Indexing
- Implementation
  - Implementing Fingerprint Indexing
  - Indexing Applications
  - Tailoring to Beagle
- Results
  - Evaluation Metrics
  - Beagle Comparisons
  - Sample Position Comparisons

**Demodulation** 
$$\frac{l \rightarrow r \quad s[u] \approx t \vee D}{s[r\sigma] \approx t \vee D}$$

Where  $l\sigma = u$

The clause  $s[u] \approx t \vee D$  may be removed.

# Indexing Demodulation

**Demodulation** 
$$\frac{l \rightarrow r \quad s[u] \approx t \vee D}{s[r\sigma] \approx t \vee D}$$

Where  $l\sigma = u$

The clause  $s[u] \approx t \vee D$  may be removed.

- Like in Negative Unit Simplification, the most costly operation is searching for subsuming  $l$  Terms.
- We must perform this search for every possible subterm  $u$  of  $s$ .

# Fingerprint Indexing for the Hierarchic Superposition with Weak Abstraction Calculus

- The Hierarchic Superposition with Weak Abstraction Calculus imposes many restrictions on what can be used for inference.

# Fingerprint Indexing for the Hierarchic Superposition with Weak Abstraction Calculus

- The Hierarchic Superposition with Weak Abstraction Calculus imposes many restrictions on what can be used for inference.
- We may take advantage of some of these conditions to increase the effectiveness of Fingerprint Indexing.

**Table:** Fingerprint comparison table for unification; extended by considering the term hierarchy.
